## SUMMARY

Backend developer with 5 years of experience building services in Python, Django and FastAPI, designing data pipelines, and taking products from idea to production. Most of my work has been on real operational problems: automating manual processes and putting AI agents to practical use.

I have a product-builder mindset: I get energy from spotting a problem, shaping an idea, and pushing it all the way to something people can actually use. With AI tooling moving this fast, I keep myself up to date so I can turn ideas into real products faster. **DataCanvas** and **Jaryan** are my two best examples, both designed, built and shipped from scratch.

Software engineering and system design are where I have always wanted to grow, and I am working toward them deliberately: cleaner architecture, better testing, and more considered technical decisions.

## SKILLS

**BACKEND**
**Python**, **Django**, **FastAPI**, Flask, Celery, Async Programming, RESTful APIs, Microservices

**DATABASES & MESSAGING**
**PostgreSQL**, **Redis**, **Elasticsearch**, **RabbitMQ**, MongoDB, MySQL

**AI & LLMS**
**AI Agents**, **LLM Orchestration**, RAG, Prompt Engineering, Dify, Claude Code, Token Usage Tracking

**DATA**
**Pandas**, ETL Pipelines, Data Normalization, Proxy Rotation

**INFRASTRUCTURE & TOOLING**
**Docker**, **Linux**, Nginx, CI/CD, Git, Automated Testing

**FRONTEND**
**JavaScript**, React, Vue.js

**PRACTICES**
Clean Architecture, SOLID, Design Patterns, Code Review, Agile / Scrum

## WORK EXPERIENCE

### Backend Developer & System Designer
Oct 2025 – Present

National Center for Cyberspace | Tehran, Iran

- Built a **Workflow Builder engine** in Python and Django for the internal ERP portal, turning manual, human-dependent operations into automated workflows.
- Turned the portal into an **Agentic ERP** by connecting it to a conversational AI agent, so employees complete administrative tasks by chatting with it.
- Designed relational PostgreSQL data models with data integrity in mind and optimized heavy queries to cut portal response times.
- Implemented authentication, role-based access control (RBAC) and automated test suites for security and reliability.

### Backend Developer
Aug 2022 – Oct 2025

Mobonews | Tehran, Iran

- Split high-traffic modules out of a legacy WordPress monolith and rewrote them as **independent Python microservices** with clean-code standards, keeping the platform stable under peak load.
- Built an automated price-update pipeline backed by Elasticsearch for fast search and accurate data.
- Developed the backend of the Carpel learning platform: video upload, automatic transcoding, and automated subtitle translation via Google APIs.
- Implemented backend services for Swiss retail chain Natelo: smart pricing engine, admin panel, reservations and buyback.

### Backend Developer

Nov 2021 – Aug 2022

Kelid Talaei (Golden Key) | Tehran, Iran

- Helped migrate a monolithic application to microservices to enable horizontal scaling and remove processing bottlenecks.
- Designed secure, standards-based RESTful APIs for the Vidamag video-sharing platform.
- Built a **distributed video transcoding microservice** with Docker and RabbitMQ that scaled out automatically at peak load.
- Implemented token-based single sign-on (SSO) for centralized authentication across the group's platforms.

## PROJECTS

### DataCanvas — AI-Powered Business Intelligence Platform · Personal product, built from scratch

Aug 2026 – Present **datacanvas.salehi.my**

Python, Django / DRF, Pandas, PostgreSQL, Vue 3, Apache ECharts, LLM Orchestration, Docker

- Took the product from idea to production on my own: architecture, backend, frontend, data-processing pipeline, and containerized deployment with Docker.
- Users upload Excel/CSV files or connect a database directly, ask questions in plain language, and get interactive ECharts dashboards and analytical reports.
- **Computation separated from AI:** all statistics are computed deterministically in Pandas and the LLM only generates the chart structure (valid JSON), so no hallucinated numbers reach a report.
- Native Jalali calendar support for time series, automatic table detection in multi-sheet workbooks, and role-based access control (RBAC).

### Jaryan — No-Code Workflow Automation Platform · Personal product, built from scratch

May 2026 – Present **jaryan.salehi.my**

Python, FastAPI, Async Programming, DAG Engine, PostgreSQL, ReactFlow, Docker

**Goal:** one platform that combines n8n-style node-based automation with an enterprise process builder, covering both service integrations and automated tasks, and the design and execution of business processes.

- Designed and built a full-stack task orchestration platform with two views: a node-based visual canvas and a linear task list.
- Built an **asynchronous DAG execution engine** in FastAPI that runs tasks concurrently with high throughput and reliability.
- Implemented the interactive canvas in ReactFlow with real-time run-state sync between backend and frontend.

### Football Match Data Pipeline — Data engineering & web scraping

Feb 2025 – Present

Python, Scrapy, Zyte API, Proxy Rotation, Data Normalization, ETL

- Built distributed Scrapy crawlers that reliably collected **500K+ match records** from Transfermarkt.
- Designed anti-blocking measures (anti-bot handling, IP rotation) and crawl-queue management for uninterrupted collection.
- Normalized raw data into clean, structured datasets ready for machine-learning pipelines.

### MrTrader Academy — Full-stack & DevOps

Mar 2025 – Jul 2025 **mrtrader.net**

Python, Vue.js, Docker, Nginx, Let's Encrypt SSL, CI/CD

- Delivered the learning and analytics platform end to end: backend, frontend, Nginx web server, containerized services and SSL certificates.
- Set up a CI/CD pipeline automating test, build and deploy with **zero-downtime releases**.
- Sped up the development cycle with AI-assisted tooling while keeping production-level code quality.

## EDUCATION & LANGUAGES

**B.Sc. in Computer Science** | Islamic Azad University

**Languages:** Persian (native), English (professional working proficiency)
